

is hiring a full-time

(Full Stack) Software Engineer

We are looking for a motivated and inspiring new colleague to join our ambitious software engineering team.

Yesplan is an intuitive venue management web application. We are the leading software system for small and large theaters, concert halls and event venues in the Benelux and currently expanding in Europe and beyond. We strive for our users to enjoy using Yesplan, through intuitive and attractive design. Yesplan is continuously evolving software; we integrate with key apps and have an open API.

As a software engineer at Yesplan, you work with the entire team on our entire technology stack: from the database and the backend to the front-end and integrations with other products. In addition to the technical implementation, you also participate in the analysis and design of product extensions and improvements. You also contribute to all devops processes, technical support and operational standby.

We strive to deliver high quality through agile software development. If you've already done pair programming, code reviews, and daily stand-ups, and are committed to a devops culture with shared responsibilities, you'll probably fit right in.

We're looking for a team player who isn't afraid to express their opinion. It's through the continuous exchange of ideas and the occasional constructive discussion that we reach the best decisions for our product, our customers, and our team.

You have:

- **Excellent knowledge of object-oriented software development** (You already know Smalltalk? bonus points! Our backend uses Pharo Smalltalk, Seaside and GemStone/S);
- **Knowledge of web development technology** (JavaScript, HTML5, ReactJS ...);
- **A bachelor degree (or higher) in Computer Science;**
- **A number of years of experience in software development;**

You are:

- Curious, and committed to top-of-the-line work;
- Eager to work end-to-end on a young company's software: from analysis to design, to testing, deployment and support;
- Very aware that you need a great team to build great software;

We're offering you:

- An innovative challenge in SaaS software development;
- A mature development team and set of procedures, strict on writing automated tests and focusing on high-value teamwork;
- A loose, open and non-corporate working environment in one of the coolest offices in Gent, easily accessible by public transport;
- A full-time permanent contract, 38h/week, flexible working hours and working from home;
- A competitive salary package including extra benefits like a phone of choice and a laptop, excellent hospitalisation insurance and meal vouchers.
